Professional Summary

Computer Science undergraduate with hands-on experience in Machine Learning, Deep Learning, Computer Vision, and Data Science. Skilled in building end-to-end ML solutions involving data preprocessing, exploratory data analysis, feature engineering, model training, hyperparameter tuning, and model evaluation. Proficient in Python, Scikit-learn, TensorFlow, Keras, Pandas, NumPy, SQL, and OpenCV.

Technical Skills

Programming: Python, JavaScript

Data Science: Pandas, NumPy, Matplotlib, Seaborn, EDA

Machine Learning: Scikit-learn, Feature Engineering, Hyperparameter Tuning, Model Evaluation

Deep Learning: TensorFlow, Keras, CNN, Transfer Learning

Computer Vision: OpenCV

Frameworks: Flask, Streamlit, React.js, Django REST Framework

Databases: MySQL, PostgreSQL, MongoDB

Developer Tools: GitHub, Jupyter Notebook, VS Code, Postman

Deployment: Vercel, Render, Hugging Face Spaces, Neon

Experience

Artificial Intelligence Engineer Intern

Rubix

- Worked on Data Science, Machine Learning, Deep Learning, and Artificial Intelligence projects as part of an AI engineering internship.
- Performed data analysis and contributed to machine learning workflows and a client project involving applied AI and data science.
- Applied model development, evaluation, and data-driven problem solving across project workflows.

Full Stack Developer Intern

Gleamator Technologies

- Developed practical skills in full-stack application development, REST API integration, database management, and frontend development.
- Built and integrated production-ready web application features with React.js and Django REST Framework.
- Enhanced skills in API development, authentication, database integration, debugging, deployment, and teamwork on software development projects

Projects

NeuroSense: AI-Driven Parkinson's Disease Prediction Using Online Handwriting | GitHub

Aug 2025

- Developed a full-stack React.js and Flask application for Parkinson's disease screening through online handwriting analysis.
- Designed and trained a CNN using TensorFlow, Keras, OpenCV, and transfer learning, achieving **87% classification accuracy**, **0.85 F1-score**, and **96.67% specificity**; integrated the model for real-time screening.
- Published the work as a research paper at the **National Conference on Recent Innovations in Engineering (NCRIE 2025)**.

Heart Disease Prediction Using Machine Learning — Python, Pandas, Scikit-learn, XGBoost | GitHub

Jul 2026

- Developed an end-to-end machine learning pipeline for heart disease prediction using clinical data.
- Performed data preprocessing, exploratory data analysis (EDA), feature engineering, and hyperparameter tuning to optimize model performance.
- Trained and evaluated multiple machine learning models, selecting K-Nearest Neighbors (KNN) as the best-performing model based on evaluation metrics, achieving **94.4% accuracy**.

Credit Risk Prediction & Customer Scoring

Ongoing

- Working on a banking risk analytics project to assess customer credit quality and identify potential credit default risk using historical account, payment, enquiry, and demographic data.

- Performing data exploration, data preprocessing, feature engineering, and feature selection to prepare customer-level risk variables for model development.
- Developing and evaluating classification models using Gini-based evaluation and rank-order analysis to assess predictive performance and risk discrimination.
- Analyzing model outputs and customer risk segments to support consistent credit-risk decision making.

AI-Driven Crop Yield Prediction for Sustainable Agriculture — *Python, Scikit-learn, Streamlit* | GitHub Feb 2025

- Trained and evaluated multiple machine learning models for crop yield prediction using agricultural and weather data, selecting Random Forest as the final model based on evaluation metrics.
- Integrated the OpenWeather API for real-time weather-based predictions.
- Achieved **85% accuracy** and implemented a Streamlit-based user interface.

Academia Sync: Full-Stack Academic Management System — *React.js, Django REST Framework, JWT, Ollama* | GitHub Feb 2026

- Developed and deployed a multi-college academic management platform with role-based dashboards for Admin, Teacher, and Student users.
- Implemented college-specific access control, restricting students and teachers to academic data associated with their registered institution.
- Built workflows for attendance, timetables, assignments, grades, and custom forms, with AI-assisted email drafting for low-attendance alerts using Ollama.
- Deployed the React frontend on Vercel, Django REST backend on Render, and PostgreSQL database on Neon.

Publications

NeuroSense: AI-Driven Parkinson’s Disease Prediction Using Online Handwriting — ISBN: 978-81-929425-1-3
Published in National Conference on Recent Innovations in Engineering (NCRIE 2025).

AI-Driven Crop Yield Prediction for Sustainable Agriculture — E-ISSN: 2349-6185
Published in the **International Journal of Engineering Science Invention Research & Development (IJESIRD)**, Vol. 12, Special Issue 11, May 2026.

Education

K S School of Engineering and Management , Bengaluru B.E. in Computer Science (CGPA: 8.02)	<i>2022 – 2026</i>
Sri Chaitanya PU College , Bengaluru Pre-University (PCMC) — 79.67%	<i>2021 – 2022</i>
Insight Academy , Bengaluru SSLC — 70.24%	<i>2019 – 2020</i>

Certifications

- AWS Academy Graduate — AWS Academy Cloud Developing
- Postman API Fundamentals Student Expert — Postman
- Introduction to Artificial Intelligence — Infosys Springboard
- Learn React by Building the Simplest App from Scratch — Udemy
- Applied AI: Practical Implementations — Microsoft & SAP TechSaksham
- Web Application Development Workshop — PyGenicarc
