Suhas S

AI Engineer | Machine Learning Engineer | Generative AI

srisuhasgowda24@gmail.com | +91 7022134873 | LinkedIn | GitHub | Portfolio

Professional Summary

AI Engineer and Machine Learning Engineer with practical experience developing end-to-end solutions through industry internships, research, and technical projects. Experienced in building predictive models, deep learning applications, and Generative AI solutions, with strong analytical, experimentation, and problem-solving abilities. Published research in AI applications, with a focus on developing impactful solutions to real-world challenges.

Technical Skills

Programming & Version Control: Python, SQL, Git, GitHub

Data Analysis: Pandas, NumPy, EDA, Data Cleaning, Feature Engineering, Feature Selection, Matplotlib, Seaborn

Machine Learning: Scikit-learn, Random Forest, SVM, KNN, Logistic Regression, XGBoost, LightGBM, Hyperparameter Tuning

Deep Learning & Computer Vision: TensorFlow, Keras, CNNs, Transfer Learning, EfficientNet, MobileNetV2, OpenCV, Image Processing

Generative AI & NLP: LLMs, RAG, LangChain, Prompt Engineering, Sentence Transformers, ChromaDB, Ollama, Groq

Model Evaluation & Deployment: Accuracy, Precision, Recall, F1-Score, ROC-AUC, Gini Coefficient, RAGAS, Flask, Streamlit, REST APIs, Hugging Face Spaces

Experience

Artificial Intelligence Engineer Intern *Rubixe*

- Executed end-to-end Data Science, Artificial Intelligence, and Machine Learning projects, covering problem understanding, data preprocessing, exploratory data analysis, feature engineering, model development, and performance evaluation using Python.
- Developed, trained, and optimized Machine Learning and Deep Learning models for predictive and classification tasks, addressed data and model performance challenges, and derived actionable insights from evaluation results.

Full Stack Developer Intern *Gleamator Technologies*

- Developed and integrated full-stack application features using React.js and Django REST Framework, building responsive frontend components and connecting them with backend services through REST APIs.
- Implemented database operations, authentication workflows, and API integrations; troubleshot and resolved application issues through testing and debugging across frontend and backend components.

Projects

DocuMind AI: RAG-Based Document Question Answering System — *Python, LangChain, PyPDF, Sentence Transformers, ChromaDB* | GitHub *Oct 2026*

- Developed an end-to-end **Retrieval-Augmented Generation (RAG)** chatbot for answering user queries using context retrieved from uploaded PDF documents.
- Implemented PDF processing, text embeddings, and semantic retrieval using PyPDF, Sentence Transformers, ChromaDB vector search, and LangChain.
- Evaluated 10 test questions using **RAGAS**, achieving **94.71% faithfulness** and **72.57% answer relevancy**.

Bank GoodCredit: Credit Risk Prediction & Customer Scoring — *Python, Scikit-learn, LightGBM, XGBoost Aug 2026*

- Built a credit prediction model to assess customer credit quality and potential default risk using historical account, payment, enquiry, and demographic data.
- Performed data preprocessing, exploratory data analysis, feature engineering, and feature selection to build predictive classification models.
- Achieved a **39.67% Gini coefficient**, exceeding the **37.90% benchmark by 1.77 percentage points**, and validated results with feature importance and decile rank-ordering analysis.

NeuroSense: AI-Driven Parkinson's Disease Prediction Using Online Handwriting | GitHub *Aug 2025*

- Developed an AI-powered handwriting-based Parkinson's disease screening application using React.js and Flask, integrating trained deep learning and machine learning models for prediction.

- Trained and evaluated CNN and machine learning models using TensorFlow, Keras, OpenCV, and transfer learning, achieving **87% classification accuracy**, **0.85 F1-score**, and **96.67% specificity**.
- Published the work as a research paper at the **National Conference on Recent Innovations in Engineering (NCRIE 2025)**.

AI-Driven Crop Yield Prediction for Sustainable Agriculture — *Python, Scikit-learn, Streamlit* | GitHub *Feb 2025*

- Trained and evaluated machine learning models on agricultural and weather data, selecting Random Forest based on evaluation metrics.
- Integrated the OpenWeather API for real-time weather-based predictions.
- Achieved **85% accuracy** and implemented a Streamlit-based user interface.

Publications

NeuroSense: AI-Driven Parkinson's Disease Prediction Using Online Handwriting — ISBN: 978-81-929425-1-3
Published in National Conference on Recent Innovations in Engineering (NCRIE 2025).

AI-Driven Crop Yield Prediction for Sustainable Agriculture — E-ISSN: 2349-6185
Published in the **International Journal of Engineering Science Invention Research & Development (IJESIRD)**, Vol. 12, Special Issue 11, May 2026.

Education

K S School of Engineering and Management, Bengaluru *2022 – 2026*
B.E. in Computer Science **(CGPA: 8.02)**

Sri Chaitanya PU College, Bengaluru *2021 – 2022*
Pre-University (PCMC) — **79.67%**

Insight Academy, Bengaluru *2019 – 2020*
SSLC — **70.24%**

Certifications

AWS Academy Graduate — AWS Academy Cloud Developing

Postman API Fundamentals Student Expert

Introduction to Artificial Intelligence — Infosys Springboard

Applied AI: Practical Implementations — Microsoft & SAP TechSaksham
